

NetApp – WIT University Day

The workshop was organised by NetApp to educate women students on Storage industry and experience IT work place/atmosphere.

The workshop commenced with a short introduction on NetApp. The company designs the hardware and software for the storage of large volumes of data. Followed by which we were enlightened on the “Role of women in the Corporate world”. The talk included various concepts such as how a woman should possess qualities like leadership, confidence and so on to sustain in the corporate world. And also how one needs to be passionate about his/her work to reach a goal and be successful.

They gave a good insight into the storage of the data and how they do it in NetApp. They also suggested that there will be boot camp in the month of November for two days for the students as well as faculties where they will allow the students to operate on the tools used by the company.

HR informed about the certification for the storage area network which can be carried out in our campus and also we can arrange for the invited lecturer or a course on storage networks.

They also informed us that they will be coming to campus for taking Mtech Interns in the month of February to April.

Overall experience at NetApp was very good.
